

Innovation. Quality. Solutions.

Metarex Inov contains 40 g/kg metaldehyde

## Perimeter baiting ...

Applying Metarex Inov® All Weather Slug and Snail Bait early and before the opening autumn rains can save time and money.

Snails spend the summer resting on posts, stubble, weeds, bushes and other harbourages in order to conserve moisture and survive the dry summer period. With the approach of autumn however, cooler moist conditions trigger snail activity and movement from their summer resting site to find food and then mate.

Early baiting with an easy-to-apply and irresistible food source will kill snails before they have a chance to mate and lay eggs. Applying Metarex Inov before the opening autumn rains ensures that baits are present and ready to kill as soon as snails begin to move.

Metarex Inov is ideal for early season control because it offers a range of benefits including:

- **Optimised bait:** Metarex Inov kills snails quickly without relying on chance encounter. The enhanced delivery system means snails consume a lethal dose more quickly. The result is less bait required, reduced crop damage and a faster effective kill.
- **Maximum attractiveness and enhanced palatability:** Snails are attracted to Metarex Inov thanks to the unique Colzactive® technology in an enhanced delivery system, which ensures their voracious appetite for the product.
- **Superior resilience:** Metarex Inov is rainfast, persisting in wet conditions when other baits fall apart or become inactive, and does not need to be reapplied after every rain event. It will also resist the damaging effects of sun and high heat, without crumbling or turning to powder like some other pellets. Metarex Inov is formulated with the active ingredient distributed evenly throughout the bait. If Metarex Inov is visible on the ground, it's still active.
- **Excellent spreadability:** Metarex Inov is uniform in size and has an ideal weight and density to spread evenly over wide areas, then stay where it's put.

Take control of snails before they invade and apply Metarex Inov around fence lines early in the season. This strategy can significantly reduce snail numbers overall and thereby save time and money.

Treating early with Metarex Inov can also eliminate the cost of re-applying other snail baits every time it rains, and may even save the cost of treating the entire paddock later.
